

Print List Archiving for SAP

- ➔ Do you need an immediate and easy access to SAP print lists?
- ➔ Is the print list creation time-intensive and does it place severe load on your SAP system during the working hours?
- ➔ Are there certain reports that cannot be recreated the next day with the same result?
- ➔ Do multiple end users run exactly the same reports while decreasing system performance?
- ➔ Do your reports not support access to your archived data?

CONPEX PrintList improves reporting productivity

Print lists are formatted text outputs of an application program in the SAP system. In addition to printing, print lists can be stored to an archive in an electronic form.

CONPEX PrintList fully eliminates manual archiving. User-defined attributes are automatically assigned to every print list in order to make the print list search easier. End users navigate through an intuitive tree structure and retrieve required report.

For example (see figure on the left), we have searched for the print list with the following attributes:

Module FI – Accounts Payable, IDES AG (1000) company code, fiscal year 2000, annual print lists, the Vendor Business report and the CONPEX variant. Then we double-clicked on it and retrieved the print list.

An archived print list can be not only printed, but also free-text searched, saved at any workstation and analyzed with an external program (e.g. spreadsheet).

CONPEX PrintList offers the following capabilities:

- ➔ **Mass archiving** of print lists – archiving of reports about the past periods with the user-defined attributes in the selection screen variant. CONPEX PrintList is also suitable for print list migration to other systems.
- ➔ **Periodic archiving** of print lists – archiving of reports about the current period with the user-defined attributes in the selection screen variant.
- ➔ **User-defined attributes** are automatically assigned to every print list when stored.
- ➔ **Intuitive search** – print lists are logically grouped together by the utilization of the user-defined attributes.
- ➔ **Simple customizing** – adding a single entry to the CONPEX PrintList customizing will enable you to archive thousands of print lists at once.
- ➔ Utilization of the existing SAP **authorization concept**.
- ➔ **Error handling** – CONPEX PrintList detects archiving errors and automatically notifies the administrator about them.
